

Inc. 5000 Companies Data Analysis & Business Insights Dashboard

PROJECT OVERVIEW

This project analyzes the **Inc. 5000 dataset** of the fastest-growing private companies in the U.S. to uncover business trends, growth patterns, and operational efficiency.

The workflow includes:

- Data cleaning using Python
 - Data storage and querying using SQL
 - Interactive dashboard creation using Microsoft Power BI Desktop
-

TOOLS & TECHNOLOGIES

- Python (Pandas, NumPy)
 - SQL (MySQL)
 - Microsoft Power BI Desktop
-

PROJECT WORKFLOW

◆ 1. Data Cleaning (Python)

- Removed irrelevant columns
- Handled missing values (**metro** column filled using “Unknown”)
- Removed duplicates
- Converted data types (revenue, growth, workers)
- Created new feature:
 - **Revenue per Employee**

👉 Output: Clean dataset exported as CSV

♦ 2. Data Storage & Querying (SQL)

- Created database and table
- Imported cleaned dataset into MySQL
- Performed analysis using:
 - Aggregations (AVG, SUM, COUNT)
 - Filtering and grouping
 - Window functions (RANK())

👉 Example insights:

- Top companies by revenue
- Industry-wise growth trends
- State-wise company distribution

♦ 3. Dashboard Development (Power BI)

Built an **interactive dashboard** with:

KPI Cards:

- Total Revenue
- Average Growth
- Total Companies
- Total Employees

Visuals:

- Industry-wise growth analysis
- State-wise company distribution
- Top 10 companies by revenue
- Revenue distribution
- Revenue per employee (efficiency metric)

Features:

- Interactive filters (Industry, State, City)
- Clean and structured layout
- Business-focused storytelling

KEY INSIGHTS

- Revenue is highly concentrated among a few top-performing companies
- Technology and service industries show the highest growth rates
- Business activity is concentrated in specific geographic regions
- Significant variation exists in revenue per employee across industries
- Majority of companies operate in lower revenue segments

BUSINESS IMPACT

- Helps identify high-growth industries for investment
 - Highlights efficient business models using revenue per employee
 - Reveals geographic hubs for business expansion
 - Supports data-driven decision-making
-
